Direct access to AEC professionals
Increase exposure to Architecture and Engineering faculty & students
Demonstrate your support for the AEC Industry

**Earn 5 Continuing Education Credits**
Data Storage, data mining and manipulation are great advantages of BIM-enabled environments. How to manipulate large files is also a great source of problems for users. The challenge of big data and project development will be the focus of the symposium.

Project Integration

BIM technologies have the capability of enabling integrated processes. Participants will share their experiences in the form of case studies, and discuss how current computational systems support project integration.

Interoperability

For the Real World

Developing the correct data flow can radically enhance the efficiency of the Procurement/Design/Construction (PDC) process. How to tackle specific interoperability issues through the development of use cases will be discussed.
The Center for Professional Education Programs (CPEP) at the University of Kansas designs and delivers education that produces value. Value through academic non-credit continuing education programs developed by KU faculty and industry experts and offered for working professionals online, on-site, on-demand, or through customized training. Value through maximized return for your personal and academic goals. Value through the 120-year tradition of educational extension with CPEP's administrators at KU Continuing Education.
